## 1 실습

### 1 실습

Shopping List 를 만들어보세요 :)

Component

```
import React, {FC} from 'react';

const ShoppingList: FC = () => {
  return (
    <div >
    </div>
  );
};

export default ShoppingList;
```

Component Test

```
import React from 'react';
import { render, screen } from '@testing-library/react';
import ShoppingList from './ShoppingList';
/*
*/

describe(' ', () => {
  it(' "Shopping List" .', () => {
    render(<ShoppingList/>);
    const subject = screen.getByText(/Shopping List/i);
    expect(subject).toBeInTheDocument();
  });

  it(' .', () => {
    render(<ShoppingList/>);
    const subject = screen.getByTestId('test-div');
    expect(subject).toHaveClass('shopping-list');
  });
});
```
