1 Event Handling 실습

1 Event Handling 실습

Event 를 만들어 보세요!

Component

```
import React, {FC, useState} from 'react';

const EventHandling: FC = () => {
  const [message, setMessage] = useState('Click Me' /* ! */);

  return (
    <>
      <button>Button</button>
      <div data-testid="message">
        Message: {message}
      </div>
    </>
  )
};

export default EventHandling;
```

Component Test

```
import {render, screen} from "@testing-library/react";
import EventHandling from "../EventHandling";
import userEvent from "@testing-library/user-event";

/*
*/

describe('Event handling test', () => {
  test(' "Click me" "Clicked" . ', () => {
    render(<EventHandling/>);

    userEvent.click(screen.getByText('Button'));

    expect(screen.getByTestId('message')).toHaveTextContent('Clicked');
  });
});
```
